British Columbia Regional Turf Spray Program

Greens – Cool Season

With this geography-specific spray program, superintendents have a customized rotation management plan for disease control. Be sure and include these important rotations in your plan and have strong, resilient turf all year long.

- Intrinsic® brand fungicides provide a strong foundation of **Plant Health Benefits***, including broad-spectrum disease control, stronger roots and higher stress tolerance.
- New Insignia® Pro fungicide combines two trusted active ingredients for long-lasting snow mold control.
- Maxtima® fungicide is a DMI (demethylase inhibitor) that delivers long-lasting disease control of key diseases at any temperature for rotation flexibility and year-round confidence.

* **Plant Health Benefits** refer to products that contain the active ingredient pyraclostrobin.

British Columbia Region

This area features moderate temperatures and variable rainfall, with spring and fall being the wettest seasons. Disease pressure is highest in coastal and valley areas where humidity and nighttime temperatures provide ideal conditions for patch diseases like brown ring patch and summer patch. Fairy ring, anthracnose, fusarium patch and snow mold are also common on this region's cool season greens, tees and fairways.
